The application is a seamless transition and improvement of Lightroom 4. It was designed by Adobe to support one of the biggest changes in the photo editing industry that is the introduction of RAW and DNG files. The new cameras produce DNG files which are the same as RAW files. So, Lightroom adds in some of the raw editing features that a RAW editor would normally expect include exposure settings and better color palette selection. The DNG format supports all of RAW's features but lacks the Adobe Photoshop Lightroom edition. The Adobe Photoshop Lightroom features are available via the Catalog feature. This feature lets you select images and automatically organize them into folders and subfolders according to their shooting information. The list of image names shows the image title, size, format, date, software used for shooting etc., You can then easily explore the images by changing the view and filter options. Some of the smart choices of Adobe for existing functionality include the inclusion of a filter library and a filter panel. The image presets or custom presets can also be applied to newly-recorded images. Adobe Photoshop Lightroom 5 has a nice library of ready-made filters, which you can access by selecting "Preset browser". The preset browser will arrange them by album, month, and year and let you switch from one preset to other. The Adobe Photoshop Lightroom 5 also allows you to share your project's custom custom presets via social networks. Adobe Photoshop Lightroom 5 has added a smart and professional interface for enhancing your images. It is user-friendly in all respects and adds a pleasant element to the basic structure and use of the program.
